PRESS RELEASE

Royal Health Care LLC and Bloodhound Technologies to Offer Claims Analytic Services to Royal Clients

NEW YORK, New York - September 22, 2008

Royal Health Care, a third party administrator serving commercial, Medicaid and Medicare health plans announced the success of its integration with Bloodhound Technologies and its goal to offer Bloodhound's claims editing and business analytics services to Royal clients.

Neighborhood Health Providers (NHP), a Royal Health Care client selected Bloodhound as its vendor for claims editing, and Royal Health Care led the project team to implement the Bloodhound ConVergence Point™ services in September 2007. The integration of the editing tools within the Royal claims engine, PEGASYS, allows for pre-adjudication editing, thereby reducing medical claims overpayments and costs associated with recoupment activities, while increasing auto-adjudication rates. Joanne Rodd, Royal's Senior Vice President of Operations said, "We have seen tremendous success in reducing unnecessary medical costs for the health plan. At the same time have been able to work collaboratively with the provider community to show them the edits which rely on national standards".

Based on the results with Neighborhood Health Providers, Royal contacted Bloodhound to determine how it could offer the services to other existing and new Royal clients. Gary Twigg, Chief Executive Officer of Bloodhound, said, "We are very excited about expanding our relationship with Royal. Their clinical expertise, project management skills, and vision for their clients make them a great partner for our industry leading editing and analytics offering."

Royal Health Care provides its PEGASYS claims transaction system and HMA, its integrated medical management application in an ASP model to health payers. Royal also provides a full range of outsourcing services to clients. Steven J. Bory, Royal's President and Chief Executive Officer, stated "Our goal is to bring administrative efficiencies to our clients. We have seen the return on investment in working with Bloodhound and we want to offer their capabilities to our portfolio of health plans".
