PRESS RELEASE

ROYAL HEALTH CARE, LLC ANNOUNCES DELIVERY OF ITS NEW PROPRIETARY CARE MANAGEMENT APPLICATION - HMA

NEW YORK, New York – March 24, 2008

Royal Health Care, LLC, a leading healthcare technology and services company, has announced it recently completed and introduced to the marketplace a new solution for utilization and care management – HMA.

As a new, state-of-the-art utilization management application with a fully integrated case management subsystem, HMA stands apart from other solutions in several areas. First, the new product is rich in functionality including automation of task management responsibilities such as the routing of work items and notifications and the creation of electronic patient files where scanned and external patient documents can be received and maintained at the patient level. Next, HMA's flexibility and adaptability allow it to meet the needs of many different types of care management organizations that work with various benefit plans and medical polices. HMA also has a robust administrative functionality that allows user defined authorization rules, work queues, case management assessment and care plan tools and menus that aid and allow the medical management team to reconfigure current work flow processes at any time. HMA's stand-alone data warehouse also keeps the clinical team fully equipped to turn patient and provider data into meaningful information.

Deborah Campbell, Royal Health Care's Vice President, Charlotte Operations, stated, "Another feature our clients like is HMA's real-time interface to Royal's payer transaction solution, PEGASYS. The seamless interaction between HMA and PEGASYS assures users they always have the most current member, provider and benefit plan information available to them". Authorizations, referrals, and pertinent notes created in HMA are automatically transferred into PEGASYS which helps the transaction system reach even higher levels of automated, accurate claim adjudication.

HMA was developed by the Royal Data Center in collaboration with Royal Clinical and Care Management teams. Liz Jacoby, Royal's Director of Programming for the Royal Data Center commented, "The insightful input from this team of professionals on the front lines assures future users that they will be working with one of the most flexible and efficient medical management applications available today".   HMA can be used as a stand-alone application with an interface to a health plan's own claims processing engine. However, when HMA is combined with PEGASYS, health plan administrators can leverage the technology and efficiencies that the two applications can offer in providing a seamless, enterprise-wide solution for supporting both commercial and government program related health plans.
